

KAIDEN J. PENNEY

Maple Valley, WA | (206) 247-3041 | mrpenney1030@gmail.com | kaidenpenney.github.io | github.com/KaidenPenney | U.S. Citizen

EDUCATION

Washington State University, Pullman, WA

Expected December 2027

Bachelor of Science in Computer Science, Minor in Mathematics — GPA: 3.88 / 4.00

Honors: President's Honor Roll (Fall 2025, Spring 2026); CS Top Scholar (2025–2026); Dean's List; Writing Portfolio — Pass with Distinction

Relevant Coursework: Advanced Data Structures, Software Engineering I, Machine Learning, Data Mining, Systems Programming, Computer Architecture, Cyber Security & Cryptography, Programming Language Design, Automata & Formal Languages, Discrete Structures, Linear Algebra, Probability & Statistics

Green River College, Auburn, WA

2025

Associate Degree in Computer Science, completed through Running Start prior to high school graduation — GPA: 3.77 / 4.00

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, PowerShell, HTML/CSS

Frameworks & Libraries: Spring Boot, REST APIs, scikit-learn, pandas, NumPy, Streamlit, JUnit, pytest

Databases & Cloud: PostgreSQL, MySQL, AWS, Microsoft Azure, Render

Tools & Practices: Git, GitHub, Docker, Postman, Microsoft Intune, Agile/Scrum, Unit Testing, REST API Design

Certifications: AWS Certified Cloud Practitioner (2026); Microsoft Azure AI Essentials (2026); Microsoft Azure Essentials (2026)

PROFESSIONAL EXPERIENCE

SanMar — Software Operations Intern

May – August 2026

Issaquah, WA

- Identified **68 groups** of unsupported Group Policy configurations across the enterprise device fleet by scripting an automated audit in PowerShell against Intune Group Policy Analytics, producing a structured migration roadmap toward Microsoft Autopilot.
- Reduced redundant policy sprawl by **62%** by migrating enterprise Group Policies into Microsoft Intune through PowerShell scripting and consolidating overlapping firewall rules.
- Increased MDM support coverage by **23%** by validating post-migration policy enforcement through systematic endpoint testing across managed devices.

PROJECTS

Online Adapting Guesser — Java, Spring Boot, PostgreSQL, Docker

June – August 2025

- Delivered a three-layer REST API serving **7 endpoints** by architecting a Spring Boot service (controller, service, repository) over PostgreSQL that persists one shared decision tree across all user sessions, containerized in Docker and validated in Postman.
- Eliminated recursion-depth risk under concurrent web requests by re-engineering a recursive binary-tree traversal into an iterative, stateless walk that expands the tree dynamically on each incorrect guess.

E-Commerce Analytics Dashboard — Python, pandas, Streamlit, pytest

September 2026

- Reduced a **70-cell** exploratory notebook to **3** reusable, importable modules by replacing a dozen duplicated merge/groupby blocks with parameterized functions and removing hardcoded single-year logic.
- Achieved function-level test coverage across the analytics layer by writing **23 pytest unit tests** validated against hand-built DataFrames, then shipped an interactive Streamlit dashboard with year selection and low-data warnings.

Credit Card Fraud Detection Pipeline — Python, scikit-learn, pandas

April 2026

- Held the missed-fraud rate below **1%** on a held-out set of **284,807 transactions** with **0.17%** class imbalance by tuning model selection toward recall and evaluating with ROC-AUC, confusion matrix, and precision/recall/F1.
- Owned data preprocessing and feature scaling for a four-person team, building the pipeline end to end from raw transaction data through model evaluation.

Instagram Follower Comparison Extension — JavaScript, Chrome MV3

December 2025

- Collected **2,000+** usernames from a virtualized DOM by implementing scroll-height-based harvesting with Set deduplication, removing any dependency on Instagram's private API.
- Computed non-reciprocal follower sets client-side via set difference and rendered results in an injected overlay UI, with extension permissions scoped to a single host.

LEADERSHIP & AWARDS

Sigma Nu Fraternity — Scholarship Chair, Executive Council

November 2025 – Present

- Raised chapter GPA by **0.5 points across 60+ members** by designing and enforcing mandatory study-hour and academic-counseling programs, tracking compliance in Excel and Canvas and reporting metrics to the Interfraternity Council.

LeetCode Club, Washington State University — Member; algorithmic problem-solving and mock technical interviews. **100+ hours** of community service.

Awards — \$18,000 in competitive scholarships and merit tuition awards: University Achievement Award L1 (\$8,000, renewable), EECS General Scholarship (\$4,000), Frank Harold Engineering Scholarship (\$3,000), Top Scholars Tuition Waiver (\$1,500), Experience WSU Waiver (\$1,000), Tahoma General Scholarship (\$500); AP Scholar.
